Research University Competition and Financial Challenges

Each year as we prepare the *Top American Research Universities* report, we consider the state of and the context for competition among these institutions. The data reflect the work of about two years past, and sometimes this exercise feels a bit nostalgic when we find ourselves in a recently and significantly challenged environment for high performing institutions. Nonetheless, some of what we have learned over the years of these reports helps put the recent and anticipated events in some perspective.

Research Competition and Institutional Resources

In this continuing effort, made perhaps even more interesting in the current economic context, we have learned that while money matters in all institutions and is critical for the research enterprise, the exact structure of university budgets and the methods available to generate and spend money vary considerably. Not only do public and private universities operate within somewhat different, if overlapping, financial structures, but within each sector different institutions will have significantly different budgeting and resource allocation systems; legal, regulatory, and historical constraints; and institutional profiles. Those institutions with large resident student bodies operate within a much different framework than those with much smaller student populations. Those with larger numbers of graduate students compared to undergraduates will have different cost structures. Those funded in substantial amounts by state appropriated revenue and less by student fees will have a different context than those whose revenue comes primarily from tuition and endowment. Institutions whose facilities are funded by state bond issues paid by state appropriations as a state obligation have a different capital construction process than do those universities that finance their buildings through debt paid from institutional annual earned revenue.

Some universities have a more substantial commitment to high cost programs in health care, the STEM disciplines, and professional schools than others. Some institutions, by virtue of their funding model, spend much more on need based financial aid than others; some spend much more on merit-based aid. These are but a few of the many differences that have significant impact on institutional management and influence the budget allocations that serve to support high performance research competition. If we attempt to understand research university competitiveness by focusing on only one or a subset of these (which them-

selves are a subset of the many other variations in university operations), we are sure to over generalize and miss important distinctions that influence research university performance.

Measuring Institutional Wealth

Although this complexity makes it difficult to offer valid generalizations about the wisdom of particular university policies that affect income and expenses, it helps us understand that while research universities may have significantly different revenue sources and manage their expenditures in substantially different ways, the revenue imperative is a constant for all institutions. Some measure of institutional wealth is clearly a primary indicator of a university's ability to compete in a marketplace where the critical and scarce elements of high performing faculty, staff, and student talent, and the support structures required to ensure their effectiveness, must all be purchased.

A casual review of the financial data available on the top American research universities gives the clear impression that the best performing institutions on our measures are also among the wealthiest. Nonetheless, because these high performing institutions vary in size, funding structure, student and program composition, and ownership (public or private) the measurement of institutional wealth in a useful way has proved difficult. In the 2002 report, we approximated institutional wealth to see how closely it might predict research performance. In that exercise, we identified, by using a method that estimated the endowment equivalent of all sources of institutional income from every source, and then discounted that number to adjust for the baseline cost of instruction, what we could call disposable income, as the critical measure of institutional wealth for our purposes.

By disposable wealth, we mean the funds available for an incremental investment in institutional priorities after paying an estimate of the baseline cost of instruction. Those priorities could be high quality undergraduate programs to attract better students, grants to graduate students, support for research proposals to the federal government, science facilities, libraries, computer systems, or, in short, anything above the baseline cost of instruction that would improve the university's competitive position. Implicit in this notion is that disposable wealth represents an opportunity, not a guarantee. If a university has no disposable income after paying the cost of instruction, there is very little opportunity to compete in the marketplace for the scarce and expensive talent that drives research success. However, the availability of disposable income does not necessarily mean the university will spend it effectively in competing for those elements of institutional activity that define research performance.

The endowment equivalent exercise gave a clear indication that institutional wealth is indeed a key indicator of an opportunity for competitive research performance, but the methodology required considerable estimation. Our staff has been working on alternative methodologies using official financial statements. This effort, which takes advantage of some clarifications in the reporting standards for public and private institutions, offers the possibility of a more precise measurement of institutional wealth. For example, we can calculate an estimate of net assets and net assets per student.

This measure, like the disposable income indicator calculated earlier, has its own methodological difficulties. While it includes some adjustment for capital facilities, the data do not appear to capture all of the relevant facilities costs in the same way for all public and private institutions or uniformly within the category of public institutions. Nonetheless, when we compare net assets to federal research expenditures for the top 50 institutions in our group of over \$40M annual research expenditures (excluding medical and stand alone institutions to focus on more or less standard research universities), there appears to be a clear relationship between the ranking of the research institutions and their net assets. More careful analysis and some improvements in the data that we expect in next year's financial reports should allow the calculation of a better estimate of the relationship, but no matter how we look at these institutions and their resources, sufficient revenue to support the high cost of research performance appears a necessity.

The Impact of Revenue Declines on University Competitiveness

The recent dramatic reduction in state income and endowment wealth, now partially in recovery, highlights the importance of institutional wealth. Research universities, whether public or private, have been struggling with the consequences of these revenue declines using a variety of adjustment techniques in different proportions depending on the specific circumstances of the institution and its revenue context. Layoffs, furloughs, postponed construction projects; tuition and fee increases, program reductions, and some structural rearrangements in institutional organization have either taken place or are under discussion.

Faced with rapid and significant declines in revenue from traditional sources, the first cycle of cost reduction measures served to produce quick and often opportunistic savings with minimal damage to institutional and programmatic integrity. Many institutions, with memories of previous financial downturns, implemented various adjustments with the expectation that the financial cycle would be of sufficiently short duration to require no major institutional changes. Others, either because they anticipated a longer

down cycle or suffered a larger impact on their revenue as a result of local circumstances or the composition of their revenue, began reviewing the continued viability of their institutional mission leading to the implementation of significant institutional change.

The recalibration of university finances to accommodate lower revenue from various sources has consequences for all areas of institutional activity including undergraduate programs, diversity opportunities, athletic enterprises, and extending into the competitive success of research programs. The adjustment process and the elements of a research university's mission affected will vary widely between public and private sectors and within sectors. Unlike many previous financial crises, however, the dramatic decline of stock market values and the exposure of many private institutions to the consequences of high-yield, high-risk investment strategies have required those private and public institutions significantly dependent on endowment income to consider longer-term adjustment strategies.

The financial challenge affects most institutions, but individual colleges and universities will respond in different ways depending on the composition of their revenue. Where institutional budgets depend on legislative appropriations in states suffering dramatic revenue declines, the impact of the financial crisis can be severe, but where institutional budgets depend more on tuition and fees, the impact may be less. Institutions whose budgets depend significantly on endowment earnings may find the income available for competitive investments and even the continued maintenance of high levels of performance substantially reduced.

Readjustment Strategies

In moments of major economic crises, transitional financial readjustments often look more traumatic than they turn out to be. Even though this current economic downturn is more severe and longer than those of the recent past, and even though the impact on both state revenue for public universities and endowment wealth for private and many public universities is more significant than in previous cycles, it is not yet clear that the readjustments currently taking place at research universities will result in a major change in the competitive marketplace. In part this is because most research universities have stable faculty and student populations, multiple sources of income, not all of which is equally subject to the effects of the economic crisis, and sophisticated management structures capable of limiting the consequences of the revenue losses without catastrophic readjustments.

Nonetheless, different strategies for handling the abrupt and in many cases continuing loss of some revenue will have different consequences. In addition, as mentioned above,

universities have complex revenue and expenditure structures that reflect the widely varying circumstances, missions, and scale of their operations. Tuition and fees remain a source of revenue not yet subject to major declines for these research institutions. The range of support from state government to public institutions varies dramatically from as much as 30% or more of the institutional budget to under 5%. Some states have found ways to buffer, if in many cases only temporarily, the loss of state revenue. However positioned, competitive research institutions have many tools for budget adjustment, and if creatively employed, they can moderate the impact of the declines in revenue and preserve the capacity to continue to compete effectively. The complexity and stability of research universities makes estimates of the changes in competitiveness that could result from the resolution of the current global economic decline speculative. Whatever change in performance occurs as a result of revenue losses and differential institutional responses, any substantial reordering in the hierarchy of research university performance will likely take place slowly over a five to ten year period.

The principal goal of the many adjustments strategies in research universities will likely be the preservation of their ability to sustain the competition for talent. As a result, strategies that employ institutional reserves to maintain the status quo may, depending on the length of the economic recovery, leave institutions at a disadvantage relative to universities that readjust more significantly to guarantee the availability of money to recruit the next generation of faculty and sustain the highly productive research groups already at the institution. Some who do this well will have the resources to raid high performing research groups from institutions less effectively managed.

However individual universities respond, and how effectively they take advantage of the opportunities a crisis provides, will depend on a wide range of structural, institutional, political, and financial circumstances. Much of the public conversation that affects research universities will focus on the cost and structure of undergraduate programs, especially in public institutions. While this will be a critical conversation for those institutions, especially where the volume of undergraduates sustains portions of the research enterprise, it is not necessarily critical to the research enterprise. Some institutions, public or private, will surely reevaluate the wide scope of activities these research universities support, some of which may no longer be economically viable. Speculation on these topics is a favorite academic activity, exaggerated expectations of dramatic change add drama to the exercise, but our experience in studying these top American research universities recommends caution in anticipating big changes. High performing universities will continue to perform better than others,

even in a constrained resource environment. Less effective institutions will likely remain less effective. The consequence of this challenged economic environment may simply increase the competitive advantage of the most successful universities.

The Stability of Research University Performance

It is more difficult to predict how much of this will affect the competitive balance among research institutions. Over the years we have been impressed with the remarkable stability in the rankings of research universities based on their annual expenditures from federally funded sources. This stability is particularly notable at the top of the distribution, although as we look farther down the list, there is more change in relative position. If we look at the five years between 2002 and 2007, and focus on the most successful of America's research universities, those with over \$40M in federal research expenditures, we can get a sense of the competitive dynamics.

Among the top 20 public and private research universities in 2007, only one was not among the top 20 in 2002. This means that two universities changed places: one moved up from number 35 in 2002 to number 20 in 2007, and 1 moved down from number 20 in 2002 to number 23 in 2007. In addition to the institution that dropped out of the top twenty, 7 kept the same rank, 6 moved down in rank, and 6 moved up. Another way to look at this, and other groups in the list, is to look at the difference between institutions, which gives a sense of the amount of research expenditure required to change rank. Although the range of research expenditures in this top 20 group, excluding the outlier of Johns Hopkins, is about \$307M, the distance that separates one institution from the next highest ranked university ranges from about \$46M to \$9M. These numbers indicate why precision in ranking numbers is less important than maintaining a competitive position with the group.

The stability in this top group contrasts with the pattern we find when we look at the twenty institutions ranking last or at the bottom among those with over \$40M in federal research expenditures in 2007. Among this bottom 20, some six institutions fell from a higher ranked group into the last 20. Moreover, within the last 20, some 12 institutions declined and 7 institutions increased in rank, with only one staying the same. This greater ranking volatility reflects the much smaller amount of research expenditures that separate institutions in the last group. The university with the largest amount in this group has \$2.7M more federal research expenditures than the institution with the smallest amount. The smallest gap separating an institution from the next highest ranked is only \$6,000 in federal research expenditures while the largest gap in this group is still only \$2.7M.

Dramatic increases in competitive position that would move a university from the middle of one group of 20 institutions to the middle of the next group are relatively rare. For example in the five years from 2002 to 2007 only four institutions out of the over \$40M group moved up 20 or more positions. For those institutions in this high performing group, none failed to increase their federal research expenditures in this period. The amount of growth varied, of course. Excluding Johns Hopkins, the increases ranged from as much as \$198M to as little as \$2M. In percentage terms, the median growth rate for research expenditures between 2002 and 2007 equaled about 28%. The pool of dollars represented by these institutions grew from \$17.4B in 2002 to \$24.1B in 2007 or an increase of 55%. An institution would have needed to grow at about 11% a year to maintain its share of the group's research expenditures.

Other elements that contribute to research university pre-eminence exhibit similar stability over time. Indicators that reflect faculty performance such as National Academy memberships or faculty awards are concentrated among a relatively few institutions, most of which also rank high on federal research expenditures. Universities that award many doctoral degrees, recruit outstanding students, and capture large amounts of annual giving are likely to continue to do so. While the current economic malaise may last longer than previous economic downturns, the broad impact on most major public and private research universities will likely result in only a modest impact on relative performance.

All of this simply testifies to the remarkable stability of research university hierarchies. The investment, institutional commitment, departmental and program focus on competitive quality, and infrastructure for research and the associated processes of faculty recruitment and institutional investment are difficult to create. Once built, they pose a formidable entry barrier to institutions that anticipate breaking into this elite group or making dramatic advances within the group. Nonetheless, some universities have

significantly improved their competitive position over the years, and institutional readjustments to the current economic downturn and recovery may contribute to somewhat larger changes in the relative ranking of institutions on the indicators included in the Top American Research Universities. We anticipate that the current economic readjustments will most affect universities in the bottom half of the over \$40M group.

The Top American Research Universities report will continue to track the performance of these high-powered research enterprises. With the data recorded in the reports published here dating back to 1996, we can continue to observe changes in the research competitiveness of these universities.

Adjustments to The Top American Research Universities

In our continuing effort to improve the usefulness of these reports, we have made some changes over the years. A year ago we recalibrated our definition of the top American research universities at over \$40M in federal research expenditures. This cutoff captures some 90% of federal research expenditures recorded for American universities. In addition, we began an effort to separate out the research performance of institutions with and without the federal research funding spent through medical schools. This provided another way of increasing the utility of comparisons among institutions since often, although not always, medical schools contribute a substantial research component to recorded university totals. In next year's report, we will remove the non-university medical and other research institutions from our main list and include them in a separate table. By removing these more highly focused institutions from the main list, the comparisons will more closely track the performance of comprehensive research universities. As always, we will continue to provide all the data in downloadable form so that institutional researchers can construct the most appropriate comparisons for their own purposes.

Part I – The Top American Research Universities

The Center for Measuring University Performance determines the Top American Research Universities by their rank on nine different measures: Total Research, Federal Research, Endowment Assets, Annual Giving, National Academy Members, Faculty Awards, Doctorates Granted, Postdoctoral Appointees, and SAT/ACT range. (The Source Notes section of this study provides detailed information on each of the nine indicators.) The tables group research institutions according to how many times they rank in the top 25 on each of these nine measures. The top category includes those universities that rank in the top 25 on all nine indicators. The bottom category includes universities with only one of the nine measures ranked in the top 25. Within these groups, institutions are then sorted by how many times they rank between 26 and 50 on the nine performance variables, with ties listed alphabetically. A similar methodology produces a second set of institutions—those ranked 26 through 50 on the same nine measures.

For the purpose of this study, *The Center for Measuring University Performance* includes only those institutions that had at least \$40 million in federal research expenditures in fiscal year 2007. This is the same dollar cutoff used last year. There were 160 institutions who met our criteria for fiscal year 2007, 113 public and 47 private.

The first two tables list each institution with the most current data available for each measure and its corresponding national rank (i.e., rank among all institutions regardless of whether they are privately or publicly controlled). The third and fourth tables provide the same nine data measures but with the groupings determined by the control rank (i.e., rank among all private or all public institutions). Institutions ranking in the top 25 on at least one measure are included in the tables with the (1-25) identifier, while those ranking 26 through 50 are found in the tables labeled with the (26-50) header.

- **The Top American Research Universities (1-25)** identifies the 51 institutions (27 private, 25 public) that rank in the top 25 nationally on at least one of the nine measures.

- **The Top American Research Universities (26-50)** identifies the 37 institutions (8 private, 26 public) that rank 26 through 50 nationally on at least one of the nine measures.
- **The Top Private Research Universities (1-25)** identifies the 36 private institutions that rank in the top 25 among all private universities on at least one of the nine measures.
- **The Top Private Research Universities (26-50)** identifies the 11 private institutions that rank 26 through 50 among their private counterparts on at least one of the nine measures.
- **The Top Public Research Universities (1-25)** identifies the 43 public institutions that rank in the top 25 among all public universities on at least one of the nine measures.
- **The Top Public Research Universities (26-50)** identifies the 40 public institutions that rank 26 through 50 among their public counterparts on at least one of the nine measures.

Many research universities rank highly both nationally and among their public or private peers, and therefore appear in more than one table. For example, of the 36 private institutions in the Top Private Research Universities (1-25) table, 27 universities also appear in the Top American Research Universities (1-25) table.

Data found in these tables may not always match the figures published by the original source. *The Center for Measuring University Performance* makes adjustments, when necessary, to ensure that the data reflect the activity at a single campus rather than that of a multiple-campus institution or state university system. When data are missing from the original source, *The Center for Measuring University Performance* may substitute another figure, if available. A full discussion of this subject, and the various adjustments or substitutions made to the original data, is in the Data Notes section of this report.

The Center for Measuring University Performance presents these tables, along with prior years' top universities, in Microsoft Excel spreadsheets on its web site [<http://mup.asu.edu>].

Part II – The Center for Measuring University Performance – *Research Universities*

The Center for Measuring University Performance's research universities consist of academic institutions that had more than \$40 million in federal research expenditures in fiscal year 2007. In the following tables, institutions are listed alphabetically with the most current data available on each measure and their rank on each measure for each year. *The Center for Measuring University Performance* provides both the national rank (rank among all universities) and the control rank (rank within private or public universities). We include five years of data for each measure, which correspond to the same data years used in each of the five prior The Top American Research Universities reports. In addition to the nine performance variables presented in Part I tables, these tables also include other institutional characteristics related to student enrollment, medical schools, land grant status, ownership, research focus, and National Merit and National Achievement Scholars. The Source Notes section of this report provides detailed information on each data element. Tables in this section include the following:

- **Total Research Expenditures** (2003-2007)
- **Federal Research Expenditures** (2003-2007)
- **Research by Major Discipline** (2007)
- **Endowment Assets** (2004-2008)
- **Annual Giving** (2004-2008)
- **National Academy Membership** (2004-2008)
- **Faculty Awards** (2004-2008)
- **Doctorates Awarded** (2004-2008)
- **Postdoctoral Appointees** (2003-2007)
- **SAT Scores** (2003-2007)
- **National Merit and Achievement Scholars** (2004-2008)
- **Change: Research** presents trend data on total, federal, and non-federal research (1998 and 2007) in constant dollars.
- **Change: Private Support and Doctorates** provides trend data on endowment assets (1999 and 2008) and annual giving (1999 and 2008) in constant dollars, and doctorates awarded (1999 and 2008).
- **Change: Students** includes trend data on SAT/ACT ranges (1999 and 2007), National Merit and Achievement Scholars (2003 and 2008), and student headcount enrollment (1998 and 2007).
- **Institutional Characteristics** includes state location, highest degree offered, medical school and land grant status, federal research focus (summary of federal research by discipline), and total student enrollment.
- **Student Characteristics** provides headcount enrollment data broken out by level (i.e., undergraduate, graduate, first-professional), part-time enrollment by level, and degrees awarded.
- **The Center for Measuring University Performance** measures presents the number of times a university ranks in the top 25 (or 26-50) on the nine quality measures in this year's report as compared to the past six years (2004-2009 reports).

Data found in these tables may not always match the figures published by the original source. *The Center for Measuring University Performance* makes adjustments, when necessary, to ensure that the data reflect the activity at a single campus rather than that of a multiple-campus institution or state university system. When data are missing from the original source, *The Center for Measuring University Performance* may substitute another figure, if available. A full discussion of this subject, and the various adjustments or substitutions made to the original data, is in the Data Notes section of this report.

The prior years' data or ranks may differ slightly from our last report due to revised figures or estimates from the data source or institution.

The Center for Measuring University Performance's web site [<http://mup.asu.edu>] provides these same tables in Microsoft Excel spreadsheets for ease of analysis. In addition to the over-\$40-million group, the on-line tables contain data on all institutions reporting any federal research since 1990.

Part III – The Top 200 Institutions

The following tables list the top 200 universities and colleges on each of the nine performance measures, along with National Merit and Achievement Scholars. (The Source Notes section provides detailed information on each of the 10 data elements.) Unlike the previous tables in Parts I and II, this section includes data for all academic institutions regardless of their federal research activity level.

The Center for Measuring University Performance provides each institution's rank nationally among all universities as well as its rank by institutional control (i.e., rank among private or public peers). In cases where several institutions tie for last place, we use a different cutoff point. For National Academy members, we list all institutions with at least one National Academy member among their faculty. Tables in this section include:

- **2007 Total Research Expenditures**
- **2007 Federal Research Expenditures**
- **2008 Endowment Assets**
- **2008 Annual Giving**
- **2008 National Academy Membership**
- **2008 Faculty Awards**
- **2008 Doctorates Granted**
- **2007 Postdoctoral Appointees**
- **2007 SAT Scores**
- **2008 National Merit and Achievement Scholars**

Data found in these tables may not always match the figures published by the original source. *The Center for Measuring University Performance* makes adjustments, when necessary, to ensure that the data reflect the activity at a single campus rather than that of a multiple-campus institution or state university system. When data are missing from the original source, *The Center for Measuring University Performance* may substitute another figure if available. A full discussion of this subject, and the various adjustments or substitutions made to the original data, is in the Data Notes section of this report.

The Center for Measuring University Performance presents these tables, along with the prior years' top 200, as Microsoft Excel spreadsheets on-line at [<http://mup.asu.edu>].

The Top 200 Institutions – Total Research Expenditures (2007)

Top 1-50 Institutions in Total Research Expenditures	Total Research x \$1000	National Rank	Control Rank	Institutional Control
Johns Hopkins University	1,554,103	1	1	Private
University of California - San Francisco	842,840	2	1	Public
University of Wisconsin - Madison	840,672	3	2	Public

Source Notes

The Center Measures

Total Research Expenditures

Federal Research Expenditures

Source: NSF/SRS Survey of R&D Expenditures at Universities and Colleges, FY 2007.

Each year, the National Science Foundation (NSF) collects data from hundreds of academic institutions on expenditures for research and development in science and engineering fields and classifies them by source of funds (e.g., federal government, state and local government, industry, etc.). These data are the primary source of information on academic research and development (R&D) expenditures in the United States. Included in this survey are all activities specifically organized to produce research outcomes that are separately budgeted and accounted for. This “organized research” may be funded by an external agency or organization (“sponsored research”) or by a separately budgeted organizational unit within the institution (“university research”). This report excludes activities sponsored by external agencies that involve instruction, training (except training in research techniques, which is considered organized research), and health service, community service or extension service projects.

All Federally Funded Research Labs (FFRLs) are excluded from these academic expenditures data, including the following: Jet Propulsion Laboratory (California Institute of Technology); Los Alamos National Lab, Lawrence Livermore Lab, Lawrence Berkeley Lab (University of California); Software Engineering Institute (Carnegie Mellon); Argonne National Laboratory (University of Chicago); National Astronomy and Ionospheric Center (Cornell); Ames Laboratory (Iowa State University); Lincoln Laboratory (MIT); Plasma Physics Lab (Princeton); and Linear Accelerator Center (Stanford). The NSF data no longer classify the Applied Physics Lab (APL) at Johns Hopkins as an FFRL, but federal funds support the vast majority of research conducted there. The APL makes up nearly one-half of Johns Hopkins’ total R&D expenditures and 53 percent of its federal R&D expenditures.

While inconsistencies in reporting (known and unknown) do exist here, as in any survey of this type, problems arise mostly when one breaks out the data by source of funds. NSF expects institutions to use year-end accounting records to complete this report, and there are nationally recognized accounting guidelines for higher education institutions. However, there are also countless variations in institutional policy that determine whether the university reports a particular expenditure as coming from one source or another, or possibly not counted at all. Take federal formula funds for agriculture (e.g., Hatch-McIntire, Smith-Lever) as an example. We conducted an informal survey of the appropriate institutions in the Association of American Universities (AAU) and found that two out of eleven land grants did not include any of these federal funds in their 1997 NSF data, while others

included all or some of these monies. Because these funds make up a very small percentage of the total research expenditures in any given year, the impact on our total research rankings is slight. The agriculture formula funds will have a somewhat greater, but still small, impact on the federal research rankings. NSF notes, “An increasing number of institutions have linkages with industry and foundations via subcontracts, thus complicating the identification of funding source. In addition, institutional policy may determine whether unrestricted state support is reported as state or as institutional funds.”¹

We believe that the reporting inconsistencies in the data are relatively minor when using the total research expenditures and the federal research expenditures component. Federal and state government audits of institutional accounting make deceptive practices highly unlikely, even though these entities do not audit the NSF data directly. NSF goes to great lengths to verify the accuracy of the data, especially federal expenditure data—checking them against several other federal agencies that collect the same or similar information. In fact, all major federal agencies and their subdivisions submit data to NSF identifying research obligations to universities each year. Historically, the NSF data have tracked very closely the data reported by universities.² Further, for their National Patterns of R&D Resources series, NSF prefers to use the figures reported by the performers of the work (that is, academic institutions, industry, nonprofits) because they believe that the performers are in the best position to accurately report these expenditures.

In some sections of this report, these expenditure data are deflated to constant 1983 dollars to show real change over time. While NSF uses the Gross Domestic Price (GDP) implicit price deflator in its reports on federal trends in research, we use the Higher Education Price Index (HEPI) because of its narrower focus. Developed by Research Associates of Washington, the HEPI illustrates the effect of inflation on college and university operations.³ In contrast, the GDP implicit price deflator is based on change in the entire U.S. economy and, as noted by NSF itself, “[its] use more accurately reflects an ‘opportunity cost’ criterion [i.e., the value of R&D in terms of the amount of other goods and services that could have been spent with the same amount of money], rather than a measure of cost changes of doing research.”⁴

Endowment Assets

Source: NACUBO Endowment Study as reported in the Chronicle of Higher Education, endowment market value as of June 30, 2008.

Institutions report the market value of their endowment assets as of June 30 to three different sources, and they quite often use three different values. For this project, we use the National Association of College and University Business Officers (NACUBO) Endowment Study because of NACUBO’s long history of report-

ing endowments of higher education institutions, their emphasis on using audited financial statements, and their focus on net assets (i.e., includes returns on investments and excludes investment fees and other withdrawals). NACUBO conducts its study annually and reports the results each February in the Chronicle of Higher Education.

Another source for endowment assets is the Council for Aid to Education's (CAE) annual Voluntary Support of Education (VSE) survey, cosponsored by the Council for Advancement and Support of Education (CASE) and the National Association of Independent Schools. The VSE survey is useful as a secondary resource because it provides more single-campus data than the other two sources. For those institutions that report a system-wide total to NACUBO, we often use the VSE data to calculate a campus' percentage contribution to the entire system, applying that factor to the NACUBO figure. In other cases, we may substitute the VSE figure when the institution indicates that this is a good data source.

The National Center for Education Statistics (NCES) Integrated Postsecondary Education Data System (IPEDS) Finance Survey also collects information on endowment assets, but these figures are often much lower than the two other sources and also are available much later. Although IPEDS instructions say to report endowment assets for "the institution and any of its foundations or affiliated organizations," it appears that not all institutions do so.

The fact that the NACUBO study requests net assets, while IPEDS and the VSE survey request gross assets, cannot explain the large differences found in some cases. In calling various institutions, we found it very difficult to determine exactly why the numbers vary so greatly. Oftentimes, two or more individuals at an institution independently report figures for these three reports with no clear understanding of how or why the numbers differ. An examination of the 1997 endowment figures provided by these institutions showed only one university (University of North Carolina at Chapel Hill) that submitted the same figure to each of the three organizations. We discovered no consistent pattern to explain reporting variations among the institutions. This area definitely warrants more study.

Annual Giving

Source: Council for Aid to Education's Voluntary Support of Education (VSE) Survey, FY 2008.

The Council for Aid to Education (CAE), an independent subsidiary of RAND, has produced the Voluntary Support of Education (VSE) Survey since 1986. The annual giving data include all contributions actually received during the institution's fiscal year in the form of cash, securities, company products, and other property from alumni, non-alumni individuals, corporations, founda-

tions, religious organizations, and other groups. Not included in the totals are public funds, earnings on investments held by the institution, and unfulfilled pledges.

CAE's VSE Data Miner service, available on-line, provides 10 years of data for all participating institutions (more than 1,600 universities and colleges). Although this is a subscription-based service and requires a user ID and password, limited access is available on-line at [<http://www.cae.org/vse>].

National Academy Members

Source: National Academy of Sciences, National Academy of Engineering, and Institute of Medicine membership directories for 2008.

One of the highest honors that academic faculty can receive is membership in the National Academy of Sciences (NAS), the National Academy of Engineering (NAE), or the Institute of Medicine (IOM). All three are private, nonprofit organizations and serve as advisors to the federal government on science, technology, and medicine. Nominated and voted on by active members, newly elected members of these organizations receive life terms. Individuals elected to membership come from all sectors—academia, industry, government, and not-for-profit agencies or organizations. Member election dates are in February (NAE), April (NAS), and October (IOM).

The data collected for these rankings use active or emeritus members at their affiliated work institution, as reported in the on-line membership directories. In all cases, we were able to determine the specific campus for individual members. We re-check institutional affiliation annually to account for established members who have changed employers or whose membership is no longer active.

Faculty Awards in the Arts, Humanities, Science, Engineering, and Health

Source: Directories or web-based listings for multiple agencies or organizations.

For this category, we collect data from several prominent grant and fellowship programs in the arts, humanities, science, engineering, and health fields. Included in this measure are:

- American Council of Learned Societies (ACLS) Fellows, 2007-08
- Beckman Young Investigators, 2008
- Burroughs Wellcome Fund Career Awards, 2008
- Cottrell Scholars, 2008
- Fulbright American Scholars, 2008-09

- Getty Scholars in Residence, 2008-09
- Guggenheim Fellows, 2008
- Howard Hughes Medical Institute Investigators, 2008
- Lasker Medical Research Awards, 2008
- MacArthur Foundation Fellows, 2008
- Andrew W. Mellon Foundation Distinguished Achievement Awards, 2008
- National Endowment for the Humanities (NEH) Fellows, 2009
- National Humanities Center Fellows, 2008-09
- National Institutes of Health (NIH) MERIT (R37) FY 2008
- National Medal of Science and National Medal of Technology, 2007
- NSF CAREER awards (excluding those who are also PECASE winners), 2008
- Newberry Library Long-term Fellows, 2008-09
- Pew Scholars in Biomedicine, 2008
- Presidential Early Career Awards for Scientists and Engineers (PECASE), 2008
- Robert Wood Johnson Policy Fellows, 2008-09
- Searle Scholars, 2008
- Sloan Research Fellows, 2008
- Woodrow Wilson Fellows, 2008-09

While the vast majority of these programs clearly identify a particular campus, in a few instances we used the institution's web-based phone directory to determine the correct campus.

Doctorates Awarded

Source: NCES IPEDS Completions Survey, doctoral degrees awarded between July 1, 2007, and June 30, 2008.

Each year, universities report their degrees awarded to the NCES in the IPEDS Completions Survey. IPEDS provides straightforward instructions for reporting doctoral degrees awarded, and we do not find any inconsistencies in reporting among the universities included in our rankings. IPEDS asks each institution to identify the number of Doctor of Education, Doctor of Juridical Science, Doctor of Public Health, and Doctor of Philosophy degrees awarded between July 1 and June 30.

Most institutions in our study submit degree data by campus or offer doctoral degrees solely or primarily at the main campus.

In addition to doctorate degrees, TheCenter presents degrees awarded at other levels—associate's, bachelor's, master's, and professional degrees—in the Student Characteristics table.

Postdoctoral Appointees

Source: NSF/Division of Science Resource Statistics (SRS) Survey of Graduate Students and Postdoctorates in Science and Engineering, Fall 2007.

Each year, NSF and NIH collect data from all institutions offering graduate programs in any science, engineering, or health field. The Survey of Graduate Students and Postdoctorates in Science and Engineering (also called the Graduate Student Survey or GSS) reflects graduate enrollment and postdoctoral employment at the beginning of the academic year. Postdoctorates are defined in the GSS as “individuals with science and engineering PhD's, MD's, DDS's or DVM's and foreign degrees equivalent to U.S. doctorates who devote their primary effort to their own research training through research activities or study in the department under temporary appointments carrying no academic rank.” The definition excludes clinical fellows and those in medical residency training programs unless the primary purpose of their appointment is for research training under a senior mentor.

In the methodological notes for this survey,⁵ NSF indicates that it verifies the data with the institutional coordinator when dramatic year-to-year fluctuations are noted. In addition, in this data set, it is unclear whether an institution has actually reported zero postdocs or NSF has simply assigned a zero for non-response (rather than imputing by using prior-year or peer data, as described in NSF methodological notes). This year, in cases where we suspect it is not a true zero, we left the field blank.

Although each doctorate-granting campus submits data separately, NSF often aggregates them in its published reports. In all cases, we obtain the single-campus data for these schools directly from NSF.

SAT Scores

Source: NCES IPEDS Survey, SAT and ACT scores for Fall 2007.

IPEDS reports the 25th and 75th percentiles for verbal and quantitative SAT I scores for most institutions in our study. For our measure, we calculated the median of that range. Some institutions report the ACT instead of the SAT to IPEDS and some report both. We selected the test which has the greatest percentage of students reporting. To convert ACT scores, we use a conversion table provided by The College Board to generate a comparable SAT equivalent score. When an institution submits neither an SAT nor ACT score, we substitute data from other national data sources.

Other Measures of Undergraduate Quality

National Merit and Achievement Scholars

Source: The 2007-08 National Merit Scholarship Corporation Annual Report, which reflects the 2008 freshman class.

The National Merit Scholarship Corporation (NMSC) is an independent, nonprofit organization that awards scholarships to the nation's outstanding high school seniors based on their academic achievement, qualifying test scores, high school principal and counselor recommendations, and their activities, interests, and goals. The NMSC names approximately 16,000 National Merit Finalists each February. Of these, about one-half will receive a National Merit \$2,500 Scholarship, a corporate-sponsored scholarship, or a college-sponsored scholarship.

National Achievement Scholars are selected and funded in a similar fashion and represent the nation's outstanding African-American students. Ideally, the National Hispanic Scholars Program should also be included in this category, but it does not track the enrollment of its scholarship winners. Should it do so in the future, we will include these students in TheCenter's data. In this study, Merit and Achievement scholarships are credited to the main campus if the NMSC Annual Report does not indicate a branch campus.

While the number of National Merit and National Achievement award winners in the entering class provides an indication of the attractiveness of a university's undergraduate program to outstanding students, it is also an indicator that is sensitive to institutional policies on financial aid. Because the number of Merit Scholars is small, relatively small changes in institutional aid policies can have a significant impact on the number of National Merit Scholars enrolling in institutions. The average SAT score provides a broader-based and more reliable measure of overall undergraduate quality; for those reasons, we prefer the SAT scores to the number of National Merit and Achievement Scholars as an indicator of undergraduate quality.

Institutional Characteristics

Medical Schools

Source: NCES IPEDS Completions Survey, MD degrees awarded between July 1, 2007, and June 30, 2008.

Although the IPEDS Institutional Characteristics Survey does have a "medical" field that indicates whether an institution grants a medical degree, we choose not to use its data because it includes medical degrees in Veterinary Medicine, Dentistry, and other professional health-related fields. For our measure, we determined whether a particular campus awarded any MD degrees during the academic year. If the institution did not submit any data to IPEDS for that year, we then looked at whether it was accredited by the American Medical Association to determine whether the institution has a medical school.

Land Grant Institutions

Source: National Association of State Universities and Land Grant Colleges.

The first Morrill Act in 1862 appropriated federal funds for universities to provide agricultural and technical education to their citizens. A second Morrill Act in 1890 expanded eligibility to include several historically black colleges and universities, and in 1994 several Native American tribal colleges were recognized as land grant institutions. Today, there is at least one land grant institution in each state and U.S. territory and in the District of Columbia. Of the 105 institutions, most are public universities. Federal land grant institutions receive both federal and state dollars in support of their agricultural and extension activities.

While land grant status technically applies to some university systems, such as the University of California and the University of Nebraska, for our study we designate as land grant institutions only those schools that actually perform that function (e.g., UC-Berkeley, UC-Davis, UC-Riverside, Nebraska-Lincoln). In these cases, the land grant field will identify whether an institution is part of a system-wide land grant and whether the vast majority of the activity occurs on that campus. For example, UC-Davis is coded as "Yes-System" while UCLA is coded as "No-System." We consider the 1890 institutions as land grant institutions, but we identify them separately because they do not perform extension activities.

Research Focus

NSF/SRS Survey of R&D Expenditures at Universities and Colleges, FY 2007.

In addition to reporting expenditure data by source of funds, NSF identifies in what major disciplines the money is expended. In the Research by Discipline table we provide the proportion of total and federal expenditures in each discipline for those institutions with more than \$40 million in federal research. These data are useful for developing groups of similar institutions for peer analysis.

The Institutional Characteristics table provides a summary measure of an institution's research strength and concentration based on these discipline-level expenditures. Universities with 95-100% of their federal research dollars spent in one particular discipline are coded as "all." We identify institutions with 75-94% in one area as "heavy" and label those with 50-74% of their expenditures concentrated as "strong." Other universities with 25-49% in one or more disciplines we describe as "moderate." A few institutions (but none in the more than \$40 million group) have expenditures distributed fairly evenly across the disciplines; those we code as "mixed."

In some cases, where an institution reports as a multi-campus entity, we made adjustments to break out the discipline-level expenditure data by single campus. Typically, this involved moving all or a portion of the life sciences expenditures to the health or medical center campus. IPEDS fall enrollment and graduate degrees by discipline data also were used to help in this effort.

While these data offer some insight as to the research structure of a university, their usefulness is limited. For example, we may be tempted to use the life sciences as a surrogate for medical research, but we must remember that they also include agricultural and biological sciences. Further, the growing trend toward multidisciplinary and interdisciplinary projects may make it more difficult for universities to accurately reflect expenditures by discipline or sub-discipline. TheCenter chooses not to break out these sub-disciplines because the data are increasingly prone to error as further adjustments are made.

Student Characteristics

Fall Enrollment

Source: NCES IPEDS Fall Enrollment Survey, 2007.

Each November, institutions report their current fall headcount enrollment to the IPEDS Fall Enrollment Survey. Enrollment figures include both degree seeking and non-degree seeking students. TheCenter provides the headcount enrollment by level as presented by IPEDS, along with the percentage of those attending part-time. Graduate students include those seeking specialist degrees in engineering and education. First professional students include those seeking degrees in medical fields, such as Chiropractic, Dentistry, Medicine, Optometry, Osteopathic Medicine, Pharmacy, Podiatry, and Veterinary Medicine, as well as those seeking degrees in Law and Theology.

Each campus in our study submits enrollment data by campus, except for the few institutions identified in our Data Notes section. Because this is an informational item and not one of The Center's nine quality measures, we did not attempt to adjust these figures.

Federal Research with and without Medical School Research

AAMC Federal Research

Source: Association of American Medical Colleges

The Association of American Medical Colleges collects data on federally sponsored research at medical colleges through on the Liaison Committee on Medical Education (LCME) Part I-A, Annual Financial Questionnaire. We calculate each medical school's federal R&D by summing the recorded dollars and a portion of the relative administrative costs. We exclude the not-recorded dollars.

Data Notes

The raw data used for *The Top American Research Universities* project—obtained from federal agencies and national organizations—often contain information on single-campus institutions, multiple-campus institutions, and state university systems, without clearly identifying the distinctions. This makes national comparisons difficult and unreliable.

To increase the validity and usefulness of these data, *The Center* adjusts the original reported figures, when necessary, to ensure that all data represent the strength of a single-campus institution. *The Center* bases its adjustments on information gathered from the reporting agency or from the university itself. In cases where the published data represent a single campus, we do not adjust the data. When the data represent more than one campus, we first attempt to obtain a figure directly from the National Science Foundation (NSF) (for research expenditures and post-doctorates), from the institution itself, or from the university system office that submitted the data. If unavailable from those primary sources, we use an estimated or substitute figure derived from information found on the institution's web site. As a last resort, we use prior-year data as a substitute.

If the institution provides an estimate representing at least 97% of the originally published figure, we credit the full amount to the main campus. Otherwise, we use the estimate provided by the institution.

The Center does not adjust the private university data because of multi-campus or system-wide reporting. We treat all private universities in this study as single-campus institutions because, while some may have multiple campuses, they are generally in or around a single city and considered an integral part of the main campus. Furthermore, private institutions generally do not break out their data by regional, branch, or affiliated campus as often happens with public institutions.

The following tables outline the various adjustments or substitutions that we made to the original data. The tables list institutions alphabetically and include both private and public universities. For the purpose of this report, we provide notes for institutions with more than \$40 million in fiscal year 2007 federal research. Data notes for all other research universities are available on *The Center* web site [<http://mup.asu.edu>].

The Top American Research Universities

Data Notes for Universities with Over \$40 Million in Federal Research

2007 Federal Research Expenditures (NSF)	138,338	80,379	System provides system and campus level data to NSF.
2007 Total Research Expenditures (NSF)	336,468	216,032	System provides system and campus level data to NSF.
2008 Annual Giving (CAE VSE Survey)	162,109	77,264	Estimate 48% based on information from institution.
2008 Endowment Assets (NACUBO)	1,221,331	793,865	Estimate 65% based on information from institution.
University of Nebraska Medical Center			
2007 Federal Research Expenditures (NSF)	138,338	53,506	System provides system and campus level data to NSF.
2007 Total Research Expenditures (NSF)	336,468	111,751	System provides system and campus level data to NSF.
2008 Annual Giving (CAE VSE Survey)	162,109	64,164	Estimate 40% based on information from institution.
2008 Endowment Assets (NACUBO)	1,221,331	183,200	Estimate 15% based on information from institution.
University of Nevada - Las Vegas			
2008 Endowment Assets (NACUBO)		129,647	Not reported, substituted 2008 VSE.
University of New Hampshire - Durham			
2008 Endowment Assets (NACUBO)	307,054	237,339	Substituted 2008 VSE.
University of North Dakota			
2008 Endowment Assets (NACUBO)		10,582	Not reported, substituted IPEDS.
University of Oklahoma Health Sciences Center			
2007 Federal Research Expenditures (NSF)	86,422	49,261	Estimate based on University of Oklahoma data.
2007 Total Research Expenditures (NSF)	176,825	95,486	Estimate based on University of Oklahoma data.
2008 Annual Giving (CAE VSE Survey)	199,475	27,107	Estimate 14% based on information from institution.
2008 Endowment Assets (NACUBO)	1,154,794	333,735	Estimate 28.9% per institution.
University of South Carolina - Columbia			
2007 Federal Research Expenditures (NSF)	89,000	89,000	Estimate at least 97%, all dollars credit to Columbia.
2007 Total Research Expenditures (NSF)	158,857	158,857	Estimate at least 97%, all dollars credit to Columbia.
2008 Annual Giving (CAE VSE Survey)	84,560	77,280	Estimate 91% based on information from institution.
2008 Endowment Assets (NACUBO)	425,150	425,150	Estimate at least 97% based on 2008 VSE.
University of Southern Mississippi			
2008 Annual Giving (CAE VSE Survey)		4,100	Not reported, estimate based on data provided by institution.
2008 Endowment Assets (NACUBO)		62,319	Not reported, substituted IPEDS.
University of Tennessee - Knoxville			
2007 Federal Research Expenditures (NSF)	126,998	125,248	System provides system and campus level data to NSF.
2007 Total Research Expenditures (NSF)	243,184	236,488	System provides system and campus level data to NSF.
2008 Endowment Assets (NACUBO)	887,411	688,768	Substituted 2008 VSE.
University of Texas - Austin			
2008 Endowment Assets (NACUBO)	16,111,184	6,895,038	Breakout based on information provided University of Texas system.

The Top American Research Universities

Data Notes for Universities with Over \$40 Million in Federal Research

University / Statistics	Original Data (dollars in thousands)	<i>The Center</i> Data (dollars in thousands)	Comments
University of Texas Health Science Center - Houston			
2008 Endowment Assets (NACUBO)	16,111,184	182,119	Breakout based on information provided University of Texas system.
University of Texas Health Science Ctr. - San Antonio			
2008 Endowment Assets (NACUBO)	16,111,184	409,307	Breakout based on information provided University of Texas system.
University of Texas MD Anderson Cancer Center			
2008 Endowment Assets (NACUBO)	16,111,184	630,293	Breakout based on information provided University of Texas system.
University of Texas Medical Branch - Galveston			
2008 Endowment Assets (NACUBO)	16,111,184	474,018	Breakout based on information provided University of Texas system.
University of Texas SW Medical Center - Dallas			
2008 Endowment Assets (NACUBO)	16,111,184	1,368,760	Breakout based on information provided University of Texas system.
University of Vermont			
2008 Endowment Assets (NACUBO)		329,776	Substituted 2008 VSE.
University of Wisconsin - Madison			
2008 Endowment Assets (NACUBO)	1,735,456	2,119,513	Substituted 2008 VSE.
Vanderbilt University			
2008 Endowment Assets (NACUBO)	3,524,338	3,524,338	Revised 2007 data.
Washington State University - Pullman			
2008 Annual Giving (CAE VSE Survey)	74,051	74,051	Estimate at least 97%, all dollars credit to Pullman.
2008 Endowment Assets (NACUBO)	678,553	678,553	Estimate at least 97% based on information from institution.
Yeshiva University			
2008 Annual Giving (CAE VSE Survey)		137,359	Not reported, estimate based on data provided by institution.

The Center for Measuring University Performance Advisory Board

Arthur M. Cohen

Professor Emeritus
Division of Higher Education
Graduate School of Education and Information Studies
University of California, Los Angeles

Larry Goldstein

President, Campus Strategies
Consultant, NACUBO

Gerardo M. Gonzalez

University Dean, School of Education
Indiana University

Roger Kaufman

Professor Emeritus, Educational Psychology and Learning
Florida State University
Director, Roger Kaufman & Associates
Distinguished Research Professor
Sonora Institute of Technology

Gordon C. Winston

Orrin Sage Professor of Political Economy, Emeritus
Director, Williams Project on the Economics of
Higher Education
Williams College
